

## ENERGY

As an Austrian-based company, **ENERGY** acquires, develops, constructs

and operates renewable energy plants in Central and Eastern Europe. At the heart of the business is a young, dynamic team that is always looking for creative ways to make renewable energy more relevant to everyday lives. In constant collaboration with businesses, utilities and governments, **ENERGY** helps reduce Europe's dependence on fossil fuels and pave the way for cleaner and more sustainable forms of energy.

Since the founding, **ENERGY** has grown rapidly in the focus markets through the acquisition and development of large-scale renewable energy assets. With

growing asset portfolio, **ENERGY** is passionate to become one of the largest producers of renewable energy in Europe.

**ENERGY** is actively working towards a low-carbon future. Our operating portfolio, with 273 MW of capacity at 56 sites, ensures that clean electricity is reliably delivered to a wide range of communities, businesses and utilities.

At the same time, **ENERGY** is also developing greenfield projects in selected markets in Central and Eastern Europe. These are designed not only to deliver clean electricity, but also to provide a range of social, economic and professional

benefits, thereby strengthening communities and providing long-term financial security. Electricity Generation

In the Czech Republic, the company generates renewable electricity at 42 locations. With a total capacity of 95 GWh, the company supplies more than 27 thousand households.

With a capacity of 4.2 MWp, 1589 households are supplied with renewable energy from two sites in Slovakia.

Since 2020, the company has been present in Bulgaria with one site. With a capacity of 60.4 MWp, more than 20 thousand households are supplied with solar power.

The second largest foreign location after the Czech Republic is Romania. Here, the company operates 11 plants with a total capacity of more than 177 MWp. This means that more than 118,000 households can be supplied with clean and sustainable electricity from renewable energies.

ENERGY incorporates environmental, social and governance (ESG) factors into every aspect of its daily business. As a leader in renewable energy, we consider it a duty to meet the highest environmental and social standards while serving as an inspiration to business partners and supply chains.

In addition to reducing carbon emissions, ENERGY builds strong, long-lasting relationships in the communities where ENERGY operates. As a socially

responsible company, **ENERY** aims to create sustainable local jobs that provide meaningful employment and accelerate growth in the renewable energy sector.
